

The screenshot shows a Cloud Shell terminal window with a dark background and light-colored text. The terminal displays the output of an Nmap scan for two IP addresses: 127.0.17.157 and 127.0.17.158. The window title bar at the top indicates 'CLOUD SHELL' and 'Terminal', with several tabs labeled 'cloudshell' and a plus sign for additional tabs. The terminal output shows the scan results for each IP, including the host status, latency, and a list of open ports with their corresponding services.
